

To whom it may concern,

As someone who works with children with Autism I strongly support the legislation SB 1089 23-29. Along with working with students, I am also currently a student in the field of behavior analysis myself. Knowing that this legislation will help future students, as well as secure a future for me in the field is a wonderful thing in a world where job security is not always available.

I currently live and work in Milford, CT at a private school based in behavior analysis. Seeing all the good it has done for my current and previous students is proof enough that this legislation needs to be passed. A license should be required, just like it would be if you wanted to cut hair.

Thank you for your time and please help the 458 certified residents of CT, a number which is growing, gain the licensure they deserve.
